

Max. calculative systemlength

Premium, Plus, Basic

Max. calculative systemlength		
Basic	≤	300 m [only meal]
Plus GF	≤	360 m [only meal]
Plus GF	≤	270 m [Pellet]
Premium 2.0	≤	500 m [only meal] 350 m at Pellets

From 150m conditioning length a soft start should be used.

From 280m conditioning length a motorised loading hopper, and the Feedomat VI control should be used. At sows stalls and stables flatdeck this configuration should always be used.

Max. Number of corners per system = 20 (must be taken into account in conditioning length), at Basic system = 16 pieces.

Important:
the max. daily operating time for Premium and Plus is about 4,0h, for Basic 2.0H

The daily operating time is only a guideline for a life of the chain about 6000 hours of operation (under standard conditions).

Factors -such as overloading of the systems by excessive length, overcrowding, a too high number of corners, or an inconvenient pipe run- can reduce the lifetime of the chain..
