

Conveyor chain V-Power 2.0

We have done good things better !

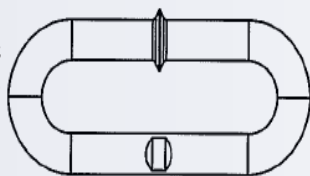

**Innovative chainlinks and
special plastic make the
difference**

Unlike conventional conveyor chains, the elements of the conveyor chains Art No. 10211047 and Art No. 10211046 consist of a hardened and highly loadable steel mixture.

By additional notches on the links, the conveyor disks access not only to the chain, but which makes one long side in on both sides, stronger fixation.

This double individual significantly form allows the discs to resist against more force. In addition, the disc are made of special glasfiber plastic and have a novel geometric shape. These combined components increases the reliability of the chain significantly.

Art Nr 10211047

- Hardened steel,
without conveying direction
- double reinforced fixed position in the disc
- Disc made of special glasfiber polyamid
- Disc-color WHITE
- Disc-Ø 44 mm
- Disc distance 71,5 mm
- For Drive unit PREMIUM and PLUS
- for calculative systemlength < 500 m
- Weight: 0,80 Kg/mtr
- VPU: 50 mtr/ bag & 800 mtr /pallet
